I'm a product designer working mostly on B2B products, where people with different roles and needs have to work together in one shared system. I joined Sepandar.co as an intern and continued in a part-time role. At Sepandar.co, I designed a support dashboard that made communication and coordination between employers, clients and the delivery team easier. My responsibilities spanned from stakeholder interviews and workflow analysis to user flows, prototyping, usability testing and UI design. In my design process, I use AI tools for research and ideation, and with Codex and vibe coding I turn ideas into prototypes faster.

SELECTED WORK

Sepandar Support Dashboard — mobile web app, Sepandar.co Aug 2024 – Jan 2025

- **Problem:** Through discussions with the company manager and observations of existing workflows, I found that employers, clients, and the delivery team managed project communication and tasks across multiple channels. This made it difficult to maintain a clear view of requests, project progress, and payments.
- **What I did:** Used AI to research competitors and similar products and to prepare interview questions. Conducted two in-person stakeholder interviews with the company manager and developers, who also used the product, and mapped existing workflows to understand user and business needs. Used AI-assisted analysis to organize interview findings and identify recurring user pain points. Designed the user flows, wireframes, interactive prototype, and high-fidelity UI in Figma. Reviewed the flows and designs with these users to gather feedback, refine the solution, and align it with business and technical requirements.
- **Outcome:** Delivered and presented the final design to stakeholders, with the product design prepared for development.

VMLM — landing page redesign, Sepandar.co Aug 2024 – Jan 2025

- **Problem:** The existing landing page was partially developed in code without a defined UI or UX structure. It lacked a clear visual hierarchy, content organization, and a consistent path toward the primary action.
- **What I did:** Redesigned the landing page for desktop and mobile, restructuring the layout and content hierarchy to create a clearer and more consistent user experience.To

inform layout decisions, I analyzed competitors with the help of AI and compared several layout options.

- **Outcome:** Delivered a complete responsive UI/UX design and presented the final direction for implementation.

Health education app — Design Academy, team of three May – Nov 2023

- **What I did:** Collaborated with two teammates across the full Design Thinking process, from research and ideation to UX and UI design. We divided the project responsibilities across the team so that each member contributed to different stages of the design process, including research and page design. We also analyzed the research data from each stage with the help of AI.
- **Outcome:** Published as a Case Study

EXPERIENCE

Junior Designer — Sepandar.co Aug 2024 – Jan 2025 · part-time

- Promoted from a three-month internship into a three-month part-time role, contributing to product and web design across the team's active projects.
- Designed the Sepandar Support Dashboard and redesigned the VMLM landing page for desktop and mobile.
- Collaborated with the cross-functional team and sought feedback from the company manager and developers throughout the design process to align solutions with business and technical requirements.

EDUCATION

B.Sc. Computer Science — Arak Azad University 2022 – 2026

SKILLS

UX/UI Design, Wireframing, Prototyping, Information Architecture, Web Design, Stakeholder & User Interviews, Usability Testing, Personas, Workflow Analysis, Vibe Coding, AI-Assisted Prototyping

TOOLS

Figma, Miro, Notion, Codex, ChatGPT, Claude

LANGUAGES

Persion (native) , English (intermediate)
